

JUNGOBUILD®

Flexible Space Solutions™

Flexible Space Solutions™

Introducing the unique JUNGOBUILD® modular perimeter frame system (MPFS), a simple, innovative way to build your own home or guest pavilion.

JUNGOBUILD® offers an excellent, cost-effective alternative to delivering large heavy frames, containers or pod structures to a site which may be remote, steep, or have limited access.

The JUNGOBUILD® system uses smaller, precision fabricated subframes made of high quality galvanized steel that can be quickly bolted together on site to form the perimeter of a much larger frame.

Load up the Ute and trailer with all the JUNGOBUILD® structural frames and panels that you need to build your very own small dwelling and start the adventure.

Live off-grid perhaps or maybe you just want to utilize that dead space in your back yard for a home office or garden room. You may want to build around your favourite tree or have an indoor garden with an atrium letting in sunlight and the rain to water it.

If water is a problem, modular underfloor storage tanks can be part of the solution, even on very difficult to build on sites.

With JUNGOBUILD® you can progressively add, remove or modify modules to meet the changing needs of your family or business. It's a system so simple you can assemble floor, walls and roof frames with ease. The subframes can usually be carried by just one or two people and assembled by them even if they have little building knowledge or experience.

Footings and stumps are also part of this amazing new system. Getting a project started and out of the ground is often the hardest and yet it is so important to get right for the rest of the build.

Jungo is a Latin word meaning to join or connect.

The JUNGObUILD® system gets you up to the floor level fast. It is straight and true, self-squaring and strong and it won't burn or be destroyed by termites. Making it the ideal solution for both country and city projects.

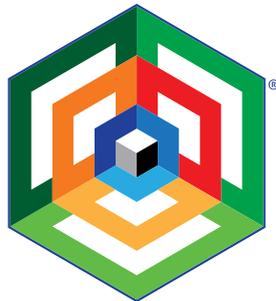

Like LEGO® there are almost infinite possibilities. With JUNGObUILD® there is both design flexibility and site adaptability.

“Modular Design Methods is no barrier to creating new, unique and creative design solutions.” [sic]

I came across this quotation recently (author unknown). I agree with it, and consider JUNGObUILD® to be the ultimate flexible building system that a designer can utilize to explore many new and creative possibilities.

Not only does JUNGObUILD® allow design options to flourish, it helps contain costs by limiting waste, accelerating construction time and utilizing unskilled labour.

Finally, and very importantly, it is a method of construction that treads lightly on the earth, which is our most precious abode in the universe.

Inventor • Designer • Builder

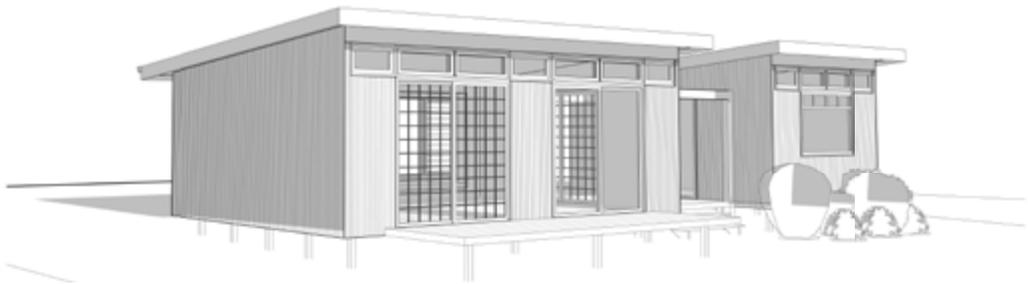

JUNGOBUILD® can be adapted for use in a wide range of applications:

- Full Homes, Granny flats, Guest Pavilions, Studios, Cabins & Cabanas
- Sheds, Workshops & Animal enclosures
- Home Office & Co-working spaces
- Camp or Group accommodation
- Special Needs & NDIS approved housing
- Affordable housing, Young adult housing starts & First People's Housing Solutions
- Disaster Relief Aid (Nationally & Internationally)
- Bushfire Safe Spaces as a Refuge for People & Wildlife
- Home Extensions & Retrofitting projects
- Pop up Medical clinics & Special events
- Art, Education and Entertainment Spaces
- Eco tourism, Glamping in remote areas, Air-B&B, Regional & Wilderness Tourism.
- Off-Grid Eco building projects

Australian and International patents approved.

JUNGOBUILD® is being developed and marketed under license by Joyce Building Systems Pty Ltd. ABN: 56 073 245 066 which is based in the Blue Mountains west of Sydney in the State of New South Wales, Australia
